

3 Points of Purity for Biomass Extraction Solvents

Ensuring Safety, Quality, & Performance

1) Manufacturer

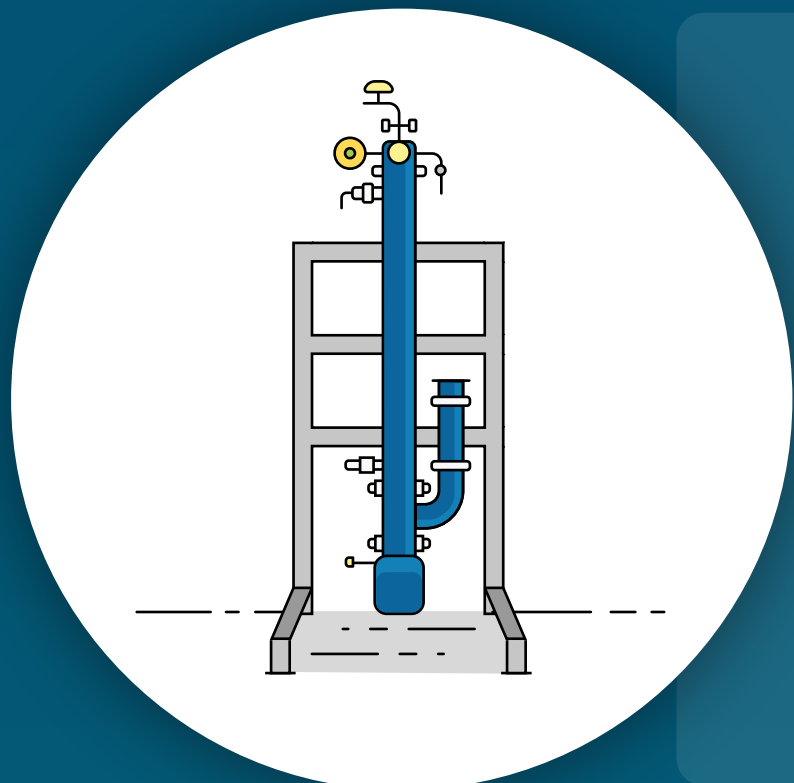

Purity starts at the source. Choose a manufacturer that:

- ✓ Purifies using hydrogenation, hydrodesulfurization, and distillation.
- ✓ Analyzes each bulk shipment and provides a Certificate of Analysis.
- ✓ Employs a dedicated fleet maintaining purity levels during transport.

2) Distributor

Packages bulk shipment into cylinders. Choose one that:

- ✓ Ensures contaminants are not introduced during packaging.
- ✓ Maintains the integrity of cylinders and storage tanks.
- ✓ Provides a Certificate of Analysis (COA).

3) Extractor

Extractors are the final point of purity. Extractors should:

- ✓ Use a clean solvent supply tank.
- ✓ Ensure integrity of extraction equipment, including pumps, pipes, and hoses.
- ✓ Continuously maintain and monitor extraction equipment.
